SUMMARY

Software Developer with 3+ years of experience shipping production web and mobile applications. Frontend-focused with React, Next.js, and React Native, and comfortable across the stack — REST APIs, Supabase, Node.js, and cloud deployment. I take features from requirements through to a released product, and I write code that is tested, reviewable, and easy for the next developer to change.

WORK EXPERIENCE

Lead Software Developer XUREDEAL PTE. LTD.

San Juan City, Metro Manila · May 2025 – Present

- Own the frontend architecture for a collectibles marketplace shipped as two mobile apps (5K+ downloads) and a merchant dashboard used in production.
- Led a cross-functional team of junior developers and interns; set up code review and PR processes that kept feature delivery on schedule.
- Introduced Zustand and TanStack Query to replace ad-hoc data fetching, cutting redundant network calls and reducing the state code the team maintains.
- Shipped releases end to end: App Store, Google Play, and web on Vercel, with CI/CD pipelines that let the team release on demand rather than on a fixed schedule.
- Partnered with product managers to plan feature roadmaps and supported high-profile endorsers during marketing campaigns.

Software Developer XUREDEAL PTE. LTD.

San Juan City, Metro Manila · Aug 2023 – May 2025

- Migrated the backend from AWS Amplify to a serverless Lambda API architecture, improving scalability and lowering operational overhead.
- Built the notification layer on a third-party email provider, automating auth and marketplace purchase confirmations so customers no longer depend on a manual follow-up.
- Integrated the frontend with the core application database through REST APIs, turning design-team output into working product flows and cutting rework between design and engineering.
- Handled SQL and .NET work during a team reorganization before specialising in frontend and complex API integration.

Full Stack Developer Intern XUREDEAL PTE. LTD.

San Juan City, Metro Manila · Apr 2023 – Jul 2023

- Built and demoed a working CRUD application in React Native within the first two weeks, earning a direct placement on the production team.
- Connected the mobile app to AWS Amplify, setting up the initial cloud backend and data synchronisation for real-time features.

Independent Full-Stack Developer (Project-Based) Self-Employed

Caloocan City, Metro Manila · 2024 – Present

- Contracted to design and build specialised web applications for corporate clients, covering requirements gathering through to deployment.
- Built a responsive web platform for a local community organisation to run outreach and manage its digital presence.

SELECTED PROJECTS

Xure / Xtore · React Native, Next.js, Zustand, TanStack Query, REST APIs, App Store / Google Play release, Vercel
A collectibles marketplace shipped as two mobile apps and a merchant dashboard. I own the frontend architecture, the merchant order-management flows, and the release process to both app stores.

Y1 Portal · Next.js, Supabase, Tailwind CSS, serverless, client-facing content publishing
A youth-organisation portal with event management and member registration, plus a custom landing-page editor that lets non-technical staff publish content without touching code.

Snap Share · React, Supabase, Tailwind CSS, real-time uploads, responsive design
A real-time photo-sharing platform with instant uploads and a responsive gallery, optimised for mobile and desktop.

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, responsive and mobile-first design, REST API integration

State & Data: Zustand, TanStack Query, React hooks, Supabase, Firebase

Mobile: React Native, Expo

Backend & Cloud: Node.js, AWS (Lambda, Amplify), serverless, SQL, .NET, Vercel, CI/CD

Tools & Practices: Git, GitHub, pull requests and code review, Jira, Codemagic, Figma, Agile and Scrum, unit testing and debugging, CI/CD, App Store and Google Play release management

EDUCATION

BET – Computer Engineering Technology 2023
Technological University of the Philippines – Manila

ICT – Mobile App and Web Development 2019
STI Academic Center, Caloocan City

CERTIFICATIONS

- ICT Computer Programming NC III — Java & .NET Technology (STI Academic Center)
- Advanced React (Meta / Coursera)
- Responsive Web Design (freeCodeCamp)
- JavaScript Algorithms and Data Structures (freeCodeCamp)

CONTINUOUS LEARNING

Currently deepening my backend practice with Node.js and PostgreSQL, and working through system design fundamentals so I can contribute to architecture decisions earlier. Outside of work I build small side projects end to end to stay sharp on the parts of the stack I do not touch daily.
